

Pacific Northwest 7 Day Significant Fire Potential

Wednesday, 3/2/2022

Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a normal risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Weather: Precipitation continues today for most of the region, but with southeastern Oregon staying dry. Showery precipitation and occasionally breezy wind will continue for the rest of the workweek with the focus of the precipitation drifting south into southern Oregon by Friday. Temperatures will gradually cool through the second half of the week with snow levels dropping accordingly. The weekend should see drier conditions move into the region briefly, with active weather resuming by Tuesday.

Check your NWS forecasts for local details including winds and snow levels.

Fire Potential: The potential for new significant fires remains very low across the geographic area.

Preparedness Level:

Northwest: 1
National: 1
